The present invention describes a library of human polynucleotides comprising the sequences given in AA212532 to AA21779. Also described is comprising the sequences given in AA212532 to AA21779. Also described is a method of detecting differentially expressed genes correlated with the differentially expressed gene product in a test sample from a cell cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell suspected of being cancerous, where the gene product is encoded by one of the 5248 polynucleotides sequences given in AA212532 to AA217779. The polynucleotides can be used for a variety of purpose, e.g. detection of expression levels, can be used for raising or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and thermaly also be used to construct carrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as

Polynucleotide sequences with potential homology were also identified
    cancer). The polynucleotides of the invention are especially used in the diagnosis, prognosis and management of colorectal cancer, breast cancer, and lung cancer. The polynucleotides can also be used to screen for peptide analogues and antagonists.

treatment of diseases associated with the inappropriate expression of ovarian and endometrial cancer polypeptides (OECPS). For example, the polynucleotide (or am expression vector comprising the polynucleotide) and the OECP may be used to treat disorders associated with decreased that affect the activity of OECPs by expressing inactive proteins or to upplement the patients own production of them. Additionally, the supplement the patients own production of them. Additionally, the polynucleotide may be used to produce the OECPs, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The polynucleotide and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in the production of anti-OECP antibodies and in assays to identify and anti-OECP antibodies and in assays to identify antiandiators of it's expression and activity. The anti-OECP antibodies and requisite expression and activity. The anti-OECP antibodies and a midgonists may also be used to down regulate expression and activity. The anti-OECP antibodies may also be used as diagnostic agents for immunosorbant assay (ELISA)) and hence diagnose patients with cancers. The present sequence is a ovarian and endometrial cancer linked cancers. The present sequence is a ovarian and endometrial cancer linked.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disporders, including eye diseases such as retinopathy, necvascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AlDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                                                                                                                                                                                                                                                    1;
                                                                                                                   The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid reunamia, Alzheimer's disease, AlDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

The present invention describes proteins and their inaquences (I) elected by chromosome 2 of the human malarial parasite, plasmodium falciparum. Also described are: (I) nuclectide sequences (II) encoding (I): and (2).

Also described are: (I) nuclectide sequences (II) encoding (I): and (2).

Covaccines against P. falciparum infection comprising (I) or (II).

Covaccines against P. falciparum infection (II) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) (I) (especially when they are rifins or secreted or membrane proteins) (I) (especially when they are rifins or secreted or membrane proteins) (I) (especially when they are rifins or secreted or membrane proteins) (I) (especially when they are rifins or secreted or membrane proteins) (I) (especially when they are rifins or secreted or membrane proteins) (I) (especially when they are rifins or secreted or membrane proteins) (I) (especially when they are rifins or secreted or membrane proteins) (I) (especially when they are rifins or secreted or membrane proteins) (I) (especially development of fargs to precess hampered by the complexity of the parasitic lifecycle, and provide new targets for resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new parts of the world, and there is a pressing need for vaccines and new and protein sequences given in the present invention, but which are not

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; Gene regulation-associated gene; severe combined immunodeficiency; cardiac damage; inflammatory response; Haemophilia; Werner syndrome; asthma; HDR syndrome; congenital heart defect; Saethre-Chotzen syndrome; renal disease; Preeclampsia; cardiac allograft vascular disease;
                                                                                                                                                                                                                                                                                                                                   The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancers by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for potentially preventing monitoring, characterising treating and polypeptides are also useful for isolating compounds with cytostatic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  212 GTTCTTCTTATTTGTGCATATTTTTATTGTTGTTTACTGATTATACGAGTAGTTATACAT 271

The invention relates to 224 nucleic acid sequences comprising at least 18 bases of a chemically pretreated gene associated with gene requiation selected from 43 known genes (or complementary sequences). The chemical pretreatment converts cytosine bases unmethylated at the chemical pretreatment converts cytosine bases unmethylated at the classifier to cytosine, to enable analysis of cytosine methylations. Cf dissimilar to cytosine, to enable analysis of cytosine methylations. Cf dissimilar to cytosine, to enable analysis of cytosine methylations. Cf useful in the diagnosis of diseases (or predisposition to diseases) associated with gene requiation and in therapy of such diseases, cardiac associated with gene combined immunodeficiency disease, cardiac chick are provided. They are especially useful in diagnosis and therapy of e.g. severe combined immunodeficiency disease, cardiac disorders, haemophilia, solid tumours and cancer, Werner syndrome, cathma, HDR syndrome, Saethre-Chotzen syndrome, renal disease, precalampsia, graft versus-host disease. The present sequence is a sequence data for this specification and is solid the printed specification, but was obtained in electronic of the printed specification, but was obtained in electronic fip. wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Sequence 14, Application US/09007119C

Patent No. 6300541

GENERAL INFORMATION:

APPLICANT: Lighthoot, David A.

APPLICANT: Merkem, Khalid

TITLE OF INVENTION: Soybean Sudden Death Syndrome Resistant Soybeans,

TITLE OF INVENTION: Soybean Cyst Nematode Resistant Soybeans and Methods of

TITLE OF INVENTION: Soybean (Soy Nomatode Resistant Plants)

TITLE OF INVENTION: Soybean (Soy Nomatode Resistant Plants)

FILE REFERENCE: Sou Illinois 1268/2 Sequence Listing

FAILER PREPAICATION NUMBER: US/09/007,119C

CURRENT FILING DATE: 1998-01-14

EARLIER APPLICATION NUMBER: 60/035,335

EARLIER PRILING DATE: 1997-01-14

NUMBER OF SEQ ID NOS: 20

SOFTWARE: Patentin Ver. 2.0

Sequence 10, Application US/09007119C

Patent No. 6300541

GENERAL INFORMATION:
APPLICANT: Lighfoot, David A.
APPLICANT: Gibson, Paul T.
APPLICANT: Gibson, Paul T.
APPLICANT: Gibson, Paul T.
APPLICANT: McKem, Khalid
TITLE OF INVENTION: Soybean Cyst Nematode Resistant Soybeans,
TITLE OF INVENTION: Soybean Cyst Nematode Resistant Soybeans and Methods of
TITLE OF INVENTION: Breeding and Identifying Resistant Plants
FILE REFERENCE: Sou Illinois 1268/2 Sequence Listing
FILE APPLICATION NUMBER: US/09/007,119C

CURRENT APPLICATION NUMBER: GO/035,335

EARLIER FILING DATE: 1997-01-14

NUMBER OF SEQ ID NOS: 20

SOFTWARE: Patentin Ver. 2.0

Sequence 1, Application US/08973462B

Patent No. 6191270

GENERAL INFORMATION:

APPLICANT: DRILHE, PIERRE

APPLICANT: DAUBERSIES, PIERRE

TITLE OF INVENTION: MALARIAL PRE-ERYTHROCYTIC STAGE POLYPEPTIDE MOLECULES

FILE REFERENCE: 066-0125-0 PCT

CURRENT APPLICATION NUMBER: US/08/973,462B

CURRENT PILING DATE: 1998-02-06

EARLIER APPLICATION NUMBER: PCT/FR96/00894

EARLIER APPLICATION NUMBER: FR 95/07007

EARLIER PILING DATE: 1995-06-13

NUMBER: OF SEQ ID NOS: 29

units. For more information on RescueMu, go to the web site 'www.zmdb.iastate.edu' and follow the links for 'RescueMu.' Grid G was grown at Stanford in 2000. DNA was extracted from leaf punches, double digested using BamHI and BglII, and ligated to form circular plasmids. DH10B capls were transformed and then screened on LB plates with a screened on LG plates with the Screened plates with t

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC ilbrary (Dros BAC) was made by Alain Billaud at CEPH (Centre of Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GSS 26-JUL-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutcyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-99 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of collaboration with the Buropean Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -: This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Whose the plants were greenhouse grown in the R Wise lab at lowa State University, Ames, IA: 7 day old green seedlings were infected with isolate 587 of Blumerla graminis f. sp. hordel, and leaves were harvested 24, 48 and 72 hr post-incoulation and snap frozen (Wise). In the TJ Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and I million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Chin). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequence and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and

                 Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage

melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw 8p, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Roest-Crollius, H., Jaillon, O., Dasilva, C., Bouneau, L., Fisher, C., Bernot, A., Fizames, C., Wincker, P., Brottier, P., Quetier, F., Saurin, W. and Weissenbach, J.
